Uniden MC 795

The Uniden **MC 795** VHF marine radio transceiver has been designed to give you a rugged, reliable instrument that will provide you with years of trouble-free service.

With proper care and maintenance, your **MC 795** will outlast your present vessel and serve you well on-board several more. The full features and flexibility designed into this quality transceiver will prevent it from becoming obsolete regardless of changes in craft or geographic locations.

The technical excellence of the **MC 795** is demonstrated by the multiplicity of uses for which it has been found acceptable by the U.S. Federal Communications Commission. The **MC 795** is acceptable for compulsory use on "party boats," for use on vessels subject to the Great Lakes Radio Agreement or bridge-to-bridge requirements, for general pleasure and commercial vessels, and certain land stations in marine service.

The **MC 795** is of all solid state design with conservatively rated rugged components and materials compatible with the marine environment. The transceiver utilizes a number of gaskets, sealing rings, waterproof membranes, and other sealants to effect a splashproof housing for protection of the electronics. The unit may be mounted in any number of convenient locations on your vessel by utilizing the universal mounting bracket.

You are encouraged to thoroughly read the rest of this Operating Guide to acquaint yourself with the characteristics and operation of your transceiver so that you can contribute to the longevity of your investment.

Be sure to complete the Product Registration Card at the back of this Guide, cut it out and mail it. You also need to complete the enclosed Warranty Registration Card and mail it.

Keep your receipt as proof-of-purchase in case warranty service is required.

INSTALLATION

CAUTION: *The MC 795 will operate only with nominal 12 volt negative ground battery systems.*

It is important to carefully determine the most suitable location for your **MC 795** on your vessel. Electrical, mechanical, and environmental considerations must all be taken into account. You must select the optimum relationship among these considerations.

Keep in mind the flexibility designed into the **MC 795** so that you can most conveniently use your radio. Features which should be considered are:

1. The universal mounting bracket may be installed on either the top or bottom of a shelf, on a bulkhead, or for overhead mounting.
2. The REMOTE speaker jack can be used with an auxiliary speaker.
3. All connections are "plug-in" type for easy removal of the radio.
4. Front fire internal speaker allows convenient in-dash mounting using the optional bracket.

CHOOSING A LOCATION

Some important factors to consider in selecting the location for your **MC 795**:

1. Select a location that is free from spray and splash.
2. Keep the battery leads as short as possible. Direct connection to the battery is most desirable. If direct connection cannot be made with the supplied power lead, any extension should be made with #10 AWG wire. Long extensions should use larger gauge wire.
3. Keep the antenna lead as short as possible. Long antenna leads can cause substantial loss of performance for both receiving and transmitting.
4. Locate your antenna as high as possible and clear from metal objects. The reliable range of coverage is a direct function of antenna height.
5. Select a location that does not allow the radio to be subjected to direct sunlight (including that coming through windows).
6. Select a location that allows free air flow around the heat sink on the rear of the radio.
7. Select a location well away from the ship's compass. Auxiliary speakers also should be located away from the compass.

ENGINE NOISE SUPPRESSION

Interference from the impulse noise generated by the electrical systems of engines is sometimes a problem with radios. The **MC 795** has been designed to be essentially impervious to ignition impulse noise and alternator noise. However, in some installations it may be necessary to take measures to further reduce the effect of noise interference. All DC battery wires, antenna lead, and accessory cables should be routed away from the engine and engine compartment, and from power cabling carrying particularly high currents.

In severe cases of impulse noise interference, it may be necessary to install a noise suppression kit. Contact your Uniden Marine Dealer for more information.

ANTENNA CONSIDERATIONS

A variety of antennas is available from a number of quality suppliers. It is recommended you draw upon the advice of your Dealer in determining a suitable antenna for your vessel and range requirements.

In general, communication range is increased by using a high-gain antenna placed as high as possible above the water line. Antennas should be located away from metal objects. Antennas should not have excessively long coaxial feed cables.

INSTALLING THE MC 795

After you have carefully considered the various factors affecting your choice of location, position the radio (with the bracket, microphone, power cord, antenna and any auxiliary cables installed) into the selected location to assure there is no interference with the surrounding items. Mark the location of the mounting bracket. Remove the bracket from the radio and use it as a template to mark the holes to be drilled for the mounting hardware. Drill the holes and mount the bracket with hardware compatible with the material of the mounting surface.

Connect the red wire of the supplied power cord to the positive (+) battery supply. Connect the black wire of the power cord to ground. The power cord is equipped with a fuse to protect the radio. Use only a Six (6) Ampere fast blow fuse for replacement. Connect the power cord to the keyed connector on the power "pigtail" (See page 6).

Connect the antenna and all other auxiliary cables.

Install the radio in the mounting bracket and connect all cables and accessories to the appropriate jacks and connectors.

CONTROLS AND INDICATORS

NOTE: For details of use of these Controls, see the OPERATION section.

FRONT PANEL

CONTROLS

- 1. VOL (On/Off/Volume)** - Turns the MC 795 On or Off and varies the audio output.

NOTE: Items 2 through 6 are Tri-Function keys. Refer to the "Tri-Function Keys" section for detailed descriptions.

- 2. HLD (Hold)**
- 3. DIM**
- 4. H/L (High/Low)**
- 5. SCN (Scan)**
- 6. C16 (Channel 16)**
- 7. F/C (Function/Clear)** - Press once for DUAL, US/INT, PA, ENT, and ALERT. Press twice to clear function.
- 8. GRP (Group)** - Accesses FISH, , USCG, MEMO and WX Scan Modes.

- 9. Rotary Channel Selector** - This control is used to manually select the desired Communication Channel (01 - 28 and 60 - 88), or Weather Channel (0 - 9).
- 10. LCD Panel** - Indicators for **DUAL**, **SEEK**, **SCAN**, **USA**, **INT'L**, **HI**, **LO**, **F**, **WX**, , **FISH**, **USCG**, **MEMO** and Channel Number.

NOTE: Refer to "INDICATORS" for detailed indicator descriptions.

- 11. SQ (Squelch)** - Eliminates the background noise when no signal is being received.
- 12. Press-To-Talk Switch** - Press to transmit; release to receive.

INDICATORS

- 13. LCD Numerical Channel Display** - Indicates Channel Number in use. Weather Channels are displayed as single digits. (Example: 0, 1, 2, 3, etc.) Communication Channels are displayed as two digits (Example: 01, 02, 03, etc.).

NOTE: LCD Status Indicators appear when status is selected by pressing the corresponding button.

- 14.  (Function)** - Indicates F/C Mode has been activated. When pressed,  remains active for eight (8) seconds.
- 15. INT'L (International)** - Indicates International Channel Mode.
- 16. USA** - Indicates US Channel Mode
- 17. SCAN** - Indicates Normal Scan Mode.
- 18. SEEK** - Indicates Timed Scan Mode on Communication Channels.

- 19. **TX (Transmit)** - LED lights when transmitting.
- 20. **DUAL (Dual Watch)** - Indicates Dual Watch Mode.
- 21. **HI (High)** - Indicates transmitted output is 25 Watts.
- 22. **LO (Low)** - Indicates transmitted output is 1 Watt.
- 23. **WX (Weather)** - Indicates Weather Channels.
- 24.  **(Telephone)** - Indicates Telephone Channels.
- 25. **FISH** - Indicates Fish Channels.
- 26. **USCG (United States Coast Guard)** - Indicates USCG Channels.
- 27. **MEMO (Memory Scan)** - Indicates Memory Scan Mode.
- 28. **PA (Public Address)** - Indicates Public Address Mode.

- 29. **AL (Alert)** - Indicates Weather Alert Mode.

- 30. **NO (No channel(s) stored)** - Indicates no channels have been stored in Memory Scan Mode.

TRI-FUNCTION KEYS

NOTE: For details of use of these Keys, see the *OPERATION* section.

- 2. **HLD (HOLD)** - This key is used to stop scanning and in conjunction with the **F/C** and **GRP** keys to access Weather Channel and Weather Alert Modes.
 - Press **HLD** to stop scanning on a desired channel.
 - Press **F/C**, then Press **HLD** to activate the Weather Alert function.
 - Press **GRP**, then Press **HLD** to scan the Weather Channels.
- 3. **DIM** - This key is used to adjust the brightness of the **LCD Panel** and the **TX LED** indicator and in conjunction with the **F/C** and **GRP** keys to access the **ENT** and **MEMO** Modes.
 - Press **DIM** to adjust the brightness of the **LCD Panel** backlight and the brightness of the **TX LED** indicator. The **LCD Panel** backlight and **TX LED** indicator are at their brightest level when the **MC 795** is shipped from the factory. When the **MC 795** is turned Off, the current **DIM** setting is retained. (Example: If the radio is set to *dim brightness* when turned off, it will be set to *dim brightness* when turned on again.)
 - Press **F/C**, then Press **DIM** to access the **ENT** Mode.
 - Press **GRP**, then Press **DIM** to scan channels stored in memory.

4. **H/L (HI/LO)** - This key is used to switch between HI (25 Watts) where allowed, or LO (1 Watt) output power and in conjunction with the **F/C** and **GRP** keys to access the Public Address and USCG Channel Modes.

- Press **H/L** to switch between HI and LO output power.
- Press **F/C**, then Press **H/L** to access the Public Address Mode.
- Press **GRP**, then Press **H/L** to access USCG Channel Mode.

5. **SCN (Scan)** - This key is used to control scanning and in conjunction with the **F/C** and **GRP** keys to switch between US and International and Telephone Channel Modes.

- Press **SCN** to scan Communication Channels.
- Press **F/C**, then Press **SCN** to switch between US and International Channel Modes.
- Press **GRP**, then Press **SCN** to access Telephone Channel Mode.

6. **C16 (Channel 16)** - This key is used to access instant Channel 16 communications and in conjunction with the **F/C** and **GRP** keys to access Dual Watch and Fish Channel Modes.

- Press **C16** to access instant Channel 16 communications.
- Press **F/C**, then Press **C16** to turn Dual Watch On/Off.
- Press **GRP**, then Press **C16** to access Fish Channel Mode.

REAR PANEL CONNECTORS

31. **Remote Speaker Connector** - An external 4 ohm, 4 Watt speaker may be connected to this jack. The connecting wire must have a miniature plug.
32. **Antenna Connector** - Connect the antenna here using a type PL259 connector.
33. **DC Power and PA Speaker Output** - The "Pigtail" cord and connector are power in and PA Speaker out.
34. **Supplied Power Cord** - Connect supplied power cord to the keyed connector.

OPERATION

1. Turn the unit On by rotating the **VOL** control clockwise.
2. Adjust the **SQ** control counterclockwise until you hear background noise; then turn it clockwise until the noise just disappears.

DUAL WATCH

Dual Watch monitors Channel 16 for activity every two seconds while scanning or monitoring.

To activate Dual Watch, Press **F/C**, then Press **C16** while in any mode. The **DUAL** indicator will appear on the **LCD Panel**, indicating Dual Watch Mode. If a signal is received on Channel 16, the radio remains on Channel 16 until the signal ends.

Press **F/C**, then Press **C16** to cancel Dual Watch Mode.

MANUAL TUNING

To manually select a channel, rotate the **Rotary Channel Selector** to the desired channel. Weather Channels are located on Channels 0 - 9. Communication Channels are located on Channels 01 - 28 and 60 - 88.

INSTANT CHANNEL 16 COMMUNICATIONS

To access instant Channel 16 communications, Press **C16**. This overrides the channel selected with the **Rotary Channel Selector** or any scanning activity. The **Channel Display** will indicate the unit is on Channel 16. Press **C16** again to release the switch (Off) and the transceiver will return to the channel selected prior to accessing instant Channel 16 communications. The **Channel Display** will indicate the selected channel.

To cancel Channel 16 communications:

- Press **C16**, or
- Press **SCN**, or
- Press **F/C** twice, or
- turn the **Rotary Channel Selector**.

TIMED SCAN (SEEK)

Press **SCN** to start **SEEK** (Timed Scan).

When **SCN** is pressed for the first time after the **MC 795** is turned on, scanning will be in the **SEEK** (Timed Scan) Mode, and **SEEK** and **DUAL** will display on the **LCD Panel**.

Notice that Dual Watch is on automatically to cover CH 16 when **SCN** is pressed.

If there is too much activity on CH 16, and you wish to exclude it from **SEEK**, Press **F/C**, then Press **C16** to cancel Dual Watch. (**DUAL** is no longer displayed on the **LCD Panel**.)

In **SEEK**, the radio stops on the first active channel and stays on for 4 (four) seconds, then resumes Timed Scanning to the next active channel. If **SCN** is pressed while the radio is stopped on an active channel, **SEEK** will be resumed immediately.

To stop scanning and remain on an active channel, Press **HLD**. If you are in a group scan mode (**FISH**, , **USCG**, **MEMO**, or **WX**), Press **HLD** to step through the channels in that group one at a time. If you are not in a group scan mode, Press **HLD** to step through all channels one at a time.

NORMAL SCAN (SCAN)

Press and Hold **SCN** until **SEEK** goes off and **SCAN** displays on the **LCD Panel**. This changes the scanning from Timed Scan to Normal Scan.

In Normal Scan, the radio will stop on the first active channel and stay until the signal is gone, or **SCN** is pressed to resume scanning.

Notice that Dual Watch is on automatically to cover CH 16 when **SCAN** Mode is activated.

If there is too much activity on CH 16, and you wish to exclude it from **SCAN**, Press **F/C**, then Press **C16** to cancel Dual Watch. (**DUAL** is no longer displayed on the **LCD Panel**.)

To stop scanning and remain on an active channel, Press **HLD**. If you are in a group scan mode (FISH, , USCG, MEMO, or WX), Press **HLD** to step through the channels in that group one at a time. If you are not in a group scan mode, Press **HLD** to step through all channels one at a time.

To cancel scanning:

- Press **HLD**, or
- Press the **Press-To-Talk** switch, or
- Press **C16**, or
- Press **F/C** twice, or
- turn the **Rotary Channel Selector**.

NOTE: **DIM**, **H/L**, **F/C + C16** and **F/C + SCN** do not affect **SCAN** Mode.

WEATHER SCAN

To scan only Weather Channels 0 - 9, Press **GRP**, then Press **HLD**. The **WX** indicator will appear on the **LCD Panel**, indicating Weather Mode. Timed Scan (**SEEK**) will not function in Weather Mode.

To change from Weather Scanning:

- Select a group other than Weather, or
- Press **C16**, or
- Press **F/C** twice, or
- Press **HLD**, then Press **SCN** to scan Communication Channels.

US/INTERNATIONAL CHANNELS

To select operation (communication and scanning) on International Channels, Press **F/C**, then Press **SCN**. **INT'L** will appear on the **LCD Panel**.

To select operation (communication and scanning) on US Channels, Press **F/C**, then Press **SCN**. **USA** will appear on the **LCD Panel**.

FISH CHANNELS

To select operation (communication and scanning) on Fish Channels, Press **GRP**, then Press **C16**. **FISH** will appear on the **LCD Panel**.

TELEPHONE CHANNELS

To select operation (communication and scanning) on Telephone Channels, Press **GRP**, then Press **SCN**.  will appear on the **LCD Panel**.

USCG CHANNELS

To select operation (communication and scanning) on USCG Channels, Press **GRP**, then Press **H/L**. **USCG** will appear on the **LCD Panel**.

ENT (Entering channel numbers into Memory Scan)

You can enter channels into Memory Scan for instant scanning at any time.

To enter a channel number into Memory Scan, access the channel number you want to store by turning the **Rotary Channel Selector**, Press **F/C**, then Press **DIM**. Memory can also be programmed during **SCAN** or **SEEK** while stopping on a signal. Press **F/C**, then Press **DIM**, to store the channel number in Memory Scan.

NOTE: *In order for all functions of the MC 795 to work properly, at least one channel number must be entered into Memory Scan before operating the radio.*

MEMORY SCAN

To scan channels stored in Memory Scan, Press **GRP**, then Press **DIM**. **MEMO** appears on the **LCD Panel**. In the Memory Scan Mode, the **MC 795** scans only those channel numbers previously entered into Memory Scan. If no channel has been entered into Memory Scan, the **NO** and **MEMO** indicators will appear on the **LCD Panel**. The **NO** indicator will blink. Pressing any button will return the radio to the channel it was on prior to accessing Memory Scan.

PUBLIC ADDRESS

To access the Public Address Mode, Press **F/C**, then Press **H/L**. The **PA** indicator will appear in the **Channel Number Display** area on the **LCD Panel**.

Press the **Press-To-Talk** switch on the microphone. Hold the microphone approximately two inches from your mouth and speak clearly in a normal voice. Release the **Press-To-Talk** switch when you are finished broadcasting.

WEATHER ALERT

The Weather Alert Mode can be activated to alert you of dangerous weather. When Weather Alert is turned on, and a warning signal is received, a siren will sound at full volume, regardless of the **VOL** setting. When the signal stops, you will hear the active weather channel broadcast at normal volume.

To activate the Weather Alert Mode:

1. Press **GRP**, then Press **HLD** to begin Weather Channel Scan.
2. When Weather Scanning stops on the active Weather Channel, Press **HLD**.
3. Press **F/C**, then Press **HLD** to turn the Weather Alert on.

OR

1. Manually select the active Weather Channel by turning the **Rotary Channel Selector**.
2. Press **F/C**, then Press **HLD** to turn the Weather Alert on.

Press **F/C**, then Press **HLD**, to cancel Weather Alert Mode.

TRANSMITTING

When the power is turned on, the transmitter is set for 25 Watts (except for USA Channels 13 and 67). The **HI** indicator will appear on the **LCD Panel**, indicating 25 Watt output power. In order to comply with FCC Regulations contained in 47 CFR 80.215 (g) (3), USA Channels 13 and 67 transmit at 1 Watt regardless of the H/L selector setting. However, 25 Watt output for emergency use is available by pressing H/L while pressing the **Press-To-Talk** switch. When the H/L switch is released, the radio returns to the 1 Watt position.

To switch to the LO (1 Watt) position, Press **H/L**. The **LO** indicator will appear on the **LCD Panel**, indicating 1 Watt output power. The LO position should always be used for in-port or short range communications.

Press **H/L** to switch to the HI (25 Watt) position. The **HI** indicator will appear on the **LCD Panel**, indicating 25 Watt output power.

To activate the transmitter, Press the **Press-To-Talk** switch on microphone. The **TX LED** indicator will light, indicating a signal is being transmitted. Release the switch to receive. When transmitting, hold the microphone approximately two inches from your mouth and speak clearly in a normal voice. The microphone provided with your radio is a 500 ohm dynamic type.

NOTE: You cannot transmit on Weather Channels 0 - 9 or Channel 15. The **Channel Number** in the **LCD Panel** will blink to indicate these channels are "receive-only".

DIMMING THE LCD DISPLAY BACKLIGHT AND THE TX INDICATOR

When the **MC 795** is shipped from the factory, the **LCD Panel** and the **TX LED** will be brightest. Successive presses of the **DIM** button will change the brightness. The change will be kept in memory.

LCD Panel

TX Indicator

Note that the **TX LED** is not turned Off by the **DIM** button.

OPTIONAL ACCESSORIES

- Flush mounting bracket for "in dash" installation.
- PA Speaker

Contact your Uniden Marine Dealer for information.

SPECIFICATIONS

GENERAL

Channels	: Transmit 55 Receive 80 Marine 10 Weather
Controls	: On-Off/Volume, Squelch
Status Indicators	: TX LED (transmit) DUAL, SEEK, SCAN, USA, INT'L, HI, LO, [F], WX, [W], FISH, USCG, and MEMO on LCD Panel
Channel Display	: LCD (Dual 7 segment)
Selector Switch	: Rotary Channel Selector
Buttons	: HLD, DIM, H/L, SCN, C16, F/C, and GRP
Connectors	: Antenna, remote speaker and DC power
Size	: 2 1/5"H x 6 2/5"W x 8"L
Weight	: 2.4 lbs
Supply Voltage	: 13.8V DC negative ground
Standard Accessories	: Mounting bracket and hardware, DC power cord, mike hanger, spare fuse.
Antenna Impedance	: 50 ohms, nominal
Microphone	: Rugged 500 ohms dynamic element with coiled cord.
Speaker	: 1.82 Inch, 8 ohms
Operating Temperature Range	: -20°C to +50°C (-4°F to +122°F)
Shock and Vibration	: Meets or exceeds EIA standards, RS152B and RS204C
FCC Approvals	: Type accepted under part 80 of the Rules; meets Great Lakes Agreement and party boat requirements.

TRANSMITTER

Power Output	: 1 watt or 25 watt (switch selectable)
Power Requirement	: 1 watt output: 1.0A @ 13.8V DC 25 watts output: 4.5A @ 13.8V DC
Modulation	: FM, \pm 5 kHz deviation (FCC designator F3E)
Hum and Noise (Signal-to-Noise)	: 45 dB @ 3 kHz
Audio Distortion	: Less than 5% with 3 kHz deviation with 1000 Hz modulating frequency
Spurious Suppression	: -60 dB @ 1 watt, -65 dB @ 25 watts
Output Power Stabilization	: Built-in automatic level control (ALC)
Frequency Range	: 156 to 158 MHz
Frequency Stability:	: \pm 300 Hz nominal

RECEIVER

Frequency Range	: 156 to 163 MHz
Sensitivity	: 0.25 μ V for 12 dB SINAD 0.35 μ V for 20 dB S/N
Circuit	: Dual Conversion Super Heterodyne PLL
Squelch Sensitivity	: 0.5 μ V Threshold
Spurious Response	: 60 dB
Adjacent Channel Selectivity	: 70 dB @ \pm 25 kHz
Audio Output Power	: 4.0 watts (10% Distortion)
Power Requirement	: 0.2A @ 13.8V DC squelched 0.9A @ 13.8V DC at maximum audio output
IF Frequencies	: 1st - 16.9 MHz 2nd - 455 kHz

MARITIME RADIO SERVICES OPERATION

Marine Radio Rules may be purchased from the US Government Printing Office by requesting "Volume IV of the FCC Rules." Among the more significant rules are:

1. You must obtain a Ship's Station License by making application to the FCC on FCC Form 506. An Interim Ship's Station License may be obtained by personal appearance at your local FCC Field Office. The Ship's Station License must be posted at the station location. Send FCC Form 506 and the \$35.00 application fee to:

FCC
Marine Ship Service
P. O. Box 358275
Pittsburgh, PA 15251-5275

instead of mailing it to the address listed on the form.

2. A Restricted Radiotelephone Operator Permit (or higher grade license) must also be obtained from the FCC in order to legally operate your transmitter in international waters. Application is to be made on FCC Form 753. An interim permit is automatically granted upon submission of your application.
